Indeed enhances huddle room video conferencing with Jabra PanaCast cameras across its global office network

Enhancing remote collaboration

With over 8,900 employees needing the best communication tools available, Indeed has extended remote collaboration tools down to even the smallest meeting rooms. However, like many other companies, they encountered limitations with standard videoconferencing equipment that inevitably cut off the participants seated closest to the camera.

Almost 700 Jabra PanaCast cameras deployed

Indeed has deployed almost 700 Jabra PanaCast cameras across their offices in New York, California, Texas, Ireland, Japan, Australia and Canada, and has made Jabra PanaCast its standard video solution for all new or retrofitted huddle rooms.

Panoramic 180-degree view

The Jabra PanaCast camera features three 13-megapixel cameras and integrated video stitching software that automatically combines the video in real-time, resulting in a complete view of the room in Panoramic-4K.

This 180° view enables all meeting participants to be involved in the conversations.

Jabra Business Development Manager, Frank Coussens said: “Someone in the company got on a video call with a supplier who was already using Jabra PanaCast cameras and saw the resulting ultra-wide-angle view that captured every inch of the room. They immediately began conversations with Jabra to bring that same PanaCast capability to their organization.”

PROJECT DETAILS:

Customer: Indeed

The world's most visited jobs website, with 21 offices around the globe and more than 8,900 employees.

Solution: Jabra PanaCast cameras

- 180-degree field of view
- Intelligent Zoom
- Integration with Zoom video conferencing

Solution benefits

- Increased cost-effectiveness
- Improved collaboration
- Easier to deploy and use

Jabra PanaCast 180-degree-view cameras are standard now in all Indeed's new or retrofitted huddle rooms.

Making the most of huddle rooms

The company's average huddle room is smaller than 10'x10' and features two wall-mounted screens, enabling simultaneous live video and screen sharing through the Zoom collaboration platform.

"Indeed maximizes their use of space in huddle rooms by placing the conference table against the wall, and with Jabra PanaCast they still can include everyone in the camera's view," Coussens continued. "The video quality is excellent, with no distortion, which is vital since they also use huddle rooms for meetings with suppliers and partners."

Integration with Zoom for instant meetings

Together with the Zoom platform, Jabra PanaCast offers a true plug-and-play solution, enabling instant meetings with no set up or technical knowledge required.

Jabra PanaCast cameras are compatible with all of today's leading collaboration software providers, including Skype, GoToMeeting, Zoom, Webex, Slack, Google Hangouts, join.me and more.
